eveOps Group

One group.
Two ways to build what comes next.

eveOps Group is a multidisciplinary operations and technology group. It brings professional human expertise and software engineering together without collapsing them into one offering.

01
Divisions
Unity Integrated Solutions and eveDev Ops

02
Model
Professional services and engineered systems

03
Start
A clear brief, then the right division

01
Unity Integrated Solutions
Professional workforce and business services across language, AI data, research, operations, and procurement.

02
eveDev Ops
Software engineering and digital products across web, mobile, SaaS, AI, automation, cloud, and APIs.

01

The group

Independent disciplines work better when their roles are clear. Each division has its own area of focus and the same standard for thoughtful delivery.

The group structure creates a direct route into each division, and leaves room for professional services and technology to support one another when a project needs both.

OPERATING PRINCIPLES

- **Clarity in the brief.**
- **Care in the build.**
- **Focus on the delivery.**

HOW A PROJECT STARTS

01 Name the outcome. What needs to be delivered, or what should work better afterwards.

02 Share the inputs. Materials, users, systems, languages, or the workflow as it stands.

03 Set the quality bar. Acceptance criteria, review, or the decision the work must support.

04 Give the timing. The first useful date, and any fixed handover or launch point.

02

Unity Integrated Solutions

The division is engaged directly. These are the service lines a brief can start from.

01 **Language Services**
Multilingual language workflows shaped around content quality, clarity, and consistency.

02 **Transcription Services**
Structured transcription support for audio, video, interviews, meetings, and validation workflows.

03 **Data Annotation & AI Training**
Human-in-the-loop data work that supports the development and evaluation of AI systems.

04 **Research & Data Services**
Research, verification, and data operations for teams that need dependable operational support.

05 **Virtual Workforce**
Project-aligned business support across administrative, content, quality, and digital operations.

06 **Content Operations**
Structured support for content review, moderation, classification, editing, and localization.

07 **Procurement Support**
Procurement and sourcing support for supplier research, comparison, coordination, and verification.

03

eveDev Ops

The division is engaged directly. These are the service lines a brief can start from.

01 **Web Development**
Websites, platforms, portals, and applications designed around clear business objectives.

02 **Mobile Development**
Mobile experiences and supporting systems planned for the way people use products in the real world.

03 **Software Engineering**
Custom software architecture for internal systems, SaaS platforms, and connected business workflows.

04 **AI Development**
Applied AI systems designed with practical operational context, evaluation, and user workflows in mind.

05 **Automation**
Connected processes that reduce repetitive work and bring important systems into one working flow.

06 **Cloud & DevOps**
Deployment and infrastructure practices planned to support secure, observable, and maintainable software.

07 **Application Security**
Security-minded architecture and application practices integrated into product engineering.

08 **API & Integrations**
APIs and integrations that help critical business systems exchange data and work together.

SHWENG

Shweng is a cross-network exchange application in development by eveDev Ops. It is a product of the group, not a client engagement. Product detail stays high-level until the work is ready to say more.

Talk to the group

Use the division that owns the work. Unity for professional services. eveDev Ops for software, AI, and digital products. If a project needs both, say so in the first note. There is no need to arrive with a finished specification.
